

Fayaaz Yasin Khan

Houston, TX | fayaazkhan1@gmail.com | (734) 353-2315 | github.com/fayaazkhan1 | [Cybersecurity Portfolio](#)

PROFESSIONAL SUMMARY

Entry-level SOC analyst candidate with hands-on experience building an Active Directory and Wazuh detection lab, analyzing Windows authentication telemetry, developing and validating custom correlation logic, and writing incident-investigation documentation. Google Cybersecurity Professional Certificate holder preparing for CompTIA Security+, with additional experience in software engineering, networking, technical instruction, troubleshooting, and team leadership.

TECHNICAL SKILLS

Security Operations – Wazuh, SIEM monitoring, alert triage, Windows Security Event Logs, authentication analysis, incident investigation, detection engineering, MITRE ATT&CK

Systems & Networking – Active Directory, Windows Server, DNS, Ubuntu/Linux, TCP/IP, VirtualBox, Windows Event Viewer, Wireshark, Nmap, smbclient

Scripting & Development – PowerShell, Bash, Python, SQL/MySQL, Git/GitHub; additional coursework in C++, Java, JavaScript, and PHP

Documentation & Methods – Incident reports, technical write-ups, requirements analysis, Agile/Scrum, user stories, troubleshooting, stakeholder communication

CERTIFICATIONS

Google Cybersecurity Professional Certificate – Completed | [Credential](#)

CompTIA Security+ – In Progress

CYBERSECURITY PROJECT EXPERIENCE

Active Directory Password Spray Detection & Investigation Lab

Portfolio Project

- Designed and deployed an isolated two-VM lab using Windows Server, Active Directory Domain Services, DNS, Ubuntu, VirtualBox, and Wazuh; configured separate NAT and host-only networks for internet access and controlled lab communication.
- Created a fictional domain (bluecorp.local) with five standard-user accounts, enabled Windows logon and credential-validation auditing, enrolled DC01 as a Wazuh endpoint, and verified Security Event IDs 4625, 4624, and 4740.
- Developed a Bash/smbclient test workflow that generated one controlled failed SMB authentication per account from a single source, producing five failures in under five minutes while avoiding repeated attacks against one user.
- Engineered custom Wazuh rule 100110 to correlate five base-rule 60122 events from the same source within 300 seconds; assigned severity level 12 and mapped the alert to MITRE ATT&CK T1110.003 (Password Spraying).
- Validated the detection with below-threshold and at-threshold tests, reviewed related successful-logon and lockout activity, and documented findings, false positives, detection limitations, and recommended response actions.
- Resolved lab issues including competing Windows routes, Wazuh manager startup failures, agent enrollment problems, and a duplicate custom-rule ID by inspecting services, logs, adapters, and rule validation output.

PROFESSIONAL EXPERIENCE

Substitute Teacher, Teachers Now – Sugar Land, TX

Dec 2024–Present

- Maintain safe, structured learning environments for groups of 20–30+ students by following established procedures, prioritizing competing needs, and responding calmly to unexpected issues.
- Clarify complex material, adapt explanations to different skill levels, and communicate professionally with students, teachers, and school staff.
- Track assignments, classroom incidents, and important handoff information so permanent staff can quickly understand progress and unresolved concerns.

Instructor, American Robotics Academy – Brookshire, TX

Aug 2024–Nov 2025

- Led K–12 robotics, engineering, and programming classes using project-based instruction and hands-on building activities.
- Developed lesson plans that combined technical concepts with practical exercises, adapting delivery for different ages, experience levels, and learning styles.
- Guided students through hardware and software troubleshooting, teamwork, critical thinking, and iterative problem solving during robotics projects.
- Maintained an organized, supportive classroom environment that encouraged curiosity, safe tool use, and completion of technical assignments.

SOC LABS & SECURITY INVESTIGATIONS

- Maintain structured lab write-ups that document objectives, data sources, investigation steps, evidence, findings, and lessons learned from hands-on security exercises.
- Apply a repeatable analyst workflow to identify relevant telemetry, validate alerts, assess possible impact, distinguish expected from suspicious activity, and communicate recommended next actions.
- Organize technical evidence, scripts, screenshots, detection content, and investigation reports in GitHub to demonstrate reproducible work and clear documentation.

SELECTED TECHNICAL PROJECTS

Network Infrastructure Planning, Universiti Teknologi Malaysia

- Planned the network infrastructure for a multi-functional, two-story campus facility and translated operational needs into a documented network design.
- Researched and compared network devices based on availability, usability, service requirements, and budget constraints; delivered detailed reports supporting design decisions.
- Evaluated end-user requirements and proposed practical connectivity solutions aligned with expected building activities and services.

EDUCATION

Associate in Science, Computer Science, Houston City College, Houston, TX

Feb 2024–Present

Software Engineering Studies, Universiti Teknologi Malaysia

Mar 2022–Jul 2023
